RHEUMATISM ARRESTED

Many people suffer the tortures of lame muscles and stiffened joints because of impurities in the blood, and each suc ceeding attack seems more acute until

Theumatism has invaded the whole system.
To arrest rheumatism it is quite as important to improve your general health as to purify your blood, and the cod liver oil in Scott's Emulsion is nature's great blood-maker, while its medicinal nourishment strengthens the organs to expel the impurities and upbuild your strength. Scott's Emulsion is helping thousands

every day who could not find other relief. Refuse the alcoholic substitutes.

Middlebury Register

It is hoped that the young man under arrest in St. Albans for firing a bullet into a car on a Central Vermont passenger train, if he is guilty of offense, will be put where he cannot repeat the proceeding. The young man in this particular case, it is thought, is mentally unbalanced. If so, the asylum is the place for him. Anyone doing such a despicably dangerous thing as firing a showed that there had been a total of gun at a passing passenger train must 1,288 debates and discussions, 7,184 vobe a degenerate, it would seem.

Civil Service Examination.

A special civil service examination will be held for the Middlebury, Vt., postoffice on June 13, in Middlebury to establish a register of eligibles for clerk (male and female) and carrier (male), from which one or more appointments

are expected to follow.

Applicants must be between the ages of 18 and 45, (except preference claimants under Section 1754, R. S., to whom the maximum age limit does not apply), and must be citizens of the United

Male applicants must measure not less than five feet, four inches in height, without shoes.

For the required application form, and a pamphlet of general information containing specimen examination questions, apply to A. G. Hinman, local secretary, at the postoffice, or Edward E. Stebbins, Secretary Board of Examiners, Post Office Building, Boston, Mass Application, benefits a property of unsightly billboards which disfigure the landscape. If Blendon grange did Applications should be promptly filled out and filed with the latter in time to arrange for the examination of

Thrown from Bicycle.

A young girl named Georgia Smith, met with an accident in Brandon Friday that might easily have proved serious. She was riding a bicycle down a hill. when she lost control of it and ran into the stone bridge, being thrown from her wheel into the river, the drop being some 12 or 15 feet. She was badly shaken up, but uninjured, and was able to mount her wheel and ride home. The water in the river was very shallow.

THE GRANGE

J. W. DARROW, Chatham, N. Y., Editor of the New York State Grange Review

SIGNIFICANT FIGURES.

Literary and Dramatic Work Granges In Massachusetts.

One can scarcely comprehend the amount or understand the full significance of the strictly literary work done in the subordinate granges of the country during a year's time. But few of the state granges keep so complete a record of this work as does New Hampshire and Massachusetts; hence it is to them that we may return for some interesting figures. We quote from the report of former State Lecturer Richardson of Massachusetts. Out of the 262 subordinate granges reports were received from 234 and from 25 Pomona granges. These reports cal selections, 5,195 other musical selections, 6,218 readings, 1,471 papers The value of the system of having read, 796 dramatic features presented, engaged. These figures, he says, would all granges had reported. This is the work of one state's subordinate and Pomona granges in part. Assuming that there are 7,000 subordinate granges in the entire country and mak-

We also get a valuable side light just advantage of them. representatives of the people in our halls of legislation. Each state has its own public questions to be discussed and problems to be solved, and in so far as these questions bear upon the The ability to swim saved at least one sured they will be discussed in the interest of the farmer we may rest aslittle girl in the recent catastrophe granges of that state. National matwhen two large vessels collided during ters bearing upon the interests of agria fog; and most likely a similar ability culture generally are discussed in granges all over the land. Is it any wonder, then, that the grange as an institution is a molder of public opinion? Is it to be for a moment doubted that it wields a powerful influence, directly and indirectly, on state and national legislation?-J. W. Darrow.

SIGNS CAME DOWN.

An Ohio Grange Removed Unsightly Billboards From the Roadside.

was backed by 200 strong, he sent his at \$25 per ton. man with the committee, which went down in an auto, and had the sign cut lum. And a good course it is, too. for the first time, that they had a right The sense of knowing what to do when to remove signs along their premises most valuable acquirements that can highway and roads were for public others were removed. It was also learned that any person who erected a sign along the public highway without consent of abutting owner, was guilty means of clearing our roadways of many unsightly signs.

Some farmers took the initiative long ago. South of Westerville W. S. McDonald and Tom Dempsey deter mined that their corners should be kept clean, and it has been done. Advertisers have learned that their signs will be cut down and laid face down along the roadside and have desisted from putting them up of late.

After all, why should not the farmer put up a sign before the merchant's place of business or residence advertising "Fresh butter and eggs always for sale;" "We take orders for cheese vegetables, fruits, jellies and butters: "John Jones will buy and sell manure; leave orders at postoffice." These signs are just as admissible in the city those of merchants advertising their goods in the country. When the the landscape. If Blendon grange did nothing else it has rendered this signal its members to their rights and prerogatives in the public highway.

Juvenile Grange Booklet. Under the direction of the national grange at its forty-seventh annual session National Secretary C. M. Freeman of Tippecanoe City, O., has prepared a little booklet of juvenile grange information. It gives a brief history of the origin of the juvenile grange work, suggestions for organizing and conducting the meetings and advice and comments by prominent matrons who have had extended experience in juvenile grange work. There is no doubt but what a juvenile grange is a helpful auxiliary to a subordinate grange, and very likely more juveniles will be organized this year than ever before.—National Stockman.

Coal ashes contain practically no fertilizing elements, hence should not be put on the garden, with perhaps the single exception of providing a sort of loosener for stiff clay soil. In such event they serve to improve the physical condition of the soil.

For the benefit of those who have not sown any aster seed it may be worth remembering that seed sown in the open ground from the 15th to the 25th of May will produce just as early and just as thrifty blossoms as plants from seed sown in a box in the house or the hotbed in March.

The department of agriculture estimates that the loss sustained by the United States during 1913 in meat animals due to disease and exposure totaled \$150,000,000. Of this vast amount hog cholera is responsible for a loss of \$75,000,000. Nineteen hogs in every 1,000 died from this disease.

There are very few soils but that are much in need of humus-decayed vegetable matter. For this reason nothing in the way of manure, leaves or other litter should be burned. Put it on the land and plow it under or pile it where the stuff will decompose. It can then be scattered next fall or in the spring.

Have you ever noticed how numerous angleworms are at the bottom of a manure pile? This seems to make clear that they like to work in rich soil, and soil that is kept well fertilized has the further advantage of being worked over and mellowed by them. This is simply a working out of the law that "to him that hath shall be

A lot of town folks and some who live in the country would be far better off if instead of doping just now with Dr. So-and-so's tonic they would drink or three mile walk. Some of the best aids to health cost mighty little-only the time and trouble necessary to take

A little sait as seasoning in mash foods for poultry is all right, but too much salt seems to act as a poison. This was clearly shown in the case of the housewife who a short time ago threw out a quantity of pickled or salted sweet corn to her chickens. Within a short time fifty-two of her flock died. It was an expensive experience and one she will not soon forget.

From the standpoint of the passerby, even if one cares nothing about it himself, it is worth while having the vegetables in the garden in straight rows. Moreover, it makes much easier the job of cultivating with the wheel hoe. And the stuff produced from straight rows tastes just as good as that put in in rows that look as if snake tracks had been used as mark-

Bulletin No. 175 of the Kentucky experiment station on the care of pigs gives the following excellent remedy for the treatment of swine infected with worms; Santonin, two and a half grains; areca nut, one dram; calomel, one grain; sodium bicarbonate, one dram. The pigs are kept without food be gained by anyone; and in many places travel, not abuse. These signs and for twelve hours prior to giving the medicine. The above dose, which is right for a hundred pound pig, should be stirred into a small amount of ground feed and repeated in about ten

> According to the London Times, an English chemist has discovered a process of manufacturing synthetically a pure and wholesome milk of high nutritive value from the soja or soy bean. It is reported that excellent cheese and butter have been manufactured from this artificial milk. These contentions may be true, but it is questionable if the method the good Lord devised, a dairy cow, can't manufacture milk more economically, provided she is given the right kind of raw materials.

With the average egg production of the country less than eighty per hen yearly there would seem to be plenty of room for improving the laying quality of the American hen. Between this low average-and millions of hens must lay less to bring the average so low-and the record of 303 eggs laid in a single year by an Oregon hen there is a wide margin. A lot of practical poultrymen have set about reducing service to her community in arousing the wide margin between the two records, eliminating the lonfers that barely pay for their board and multiplying the strains that are prolific layers,

> Many a farm fire could be extinguished and serious loss prevented were some precautions taken beforehand in the way of providing fire fighting apparatus. Where it is not feasible to have a tank of water in the attic, which should give water under fair pressure for the house and outbuildings in case of emergency, protection may be provided by connecting a gasoline engine with a force pump. Where this plan also is not feasible chemical extinguishers may be used. These should be placed at convenient places in the house and nearby buildings, directions being plainly printed on the chemical containers.
